

Bannerghatta Bird Survey 2018

Interim Report – February

BNP Bird Survey 2018 was planned and organized in association with Wildlife Conservation Group (WCG), Bangalore. Instead of the traditional pen and paper approach Open Data Kit forms were used to make the data collection, aggregation, storage and analysis phenomenally faster and more accurate. The purpose of the survey, the future plans, do's and don'ts, Rules and Regulations, Precautions and other instructions were communicated during the induction program. ODK forms were setup and volunteers were trained before they left for their assigned locations. Each group consisted of 4 or 3 volunteers along with 1 or 2 watchers. The GPS location of the transect lines were provided to the respective groups and they were dropped to the nearest possible location using 2 mini bus. Volunteers commenced birding on the allocated transect line lead by the respective watchers. Lunch was arranged in the designated APCs. Each group was picked up in the mini bus and were dropped in the DCF office after the end of the survey.
